

S06 - Hospital Appointment Priority

PROGRAM

```
class Hospital:
    def __init__(self, age, emergency):
        self.age = age
        self.emergency = emergency

    def priority(self):
        if self.emergency == "YES":
            print("Priority = CRITICAL")
        elif self.age >= 60:
            print("Priority = HIGH")
        elif self.age >= 40:
            print("Priority = MEDIUM")
        else:
            print("Priority = LOW")

h = Hospital(65, "NO")
h.priority()
```

OUTPUT

Priority = HIGH
