

Write a Python program using a `while True` loop to display a menu with four options: Area of Circle, Area of Rectangle, Area of Square, and Exit. Accept the user's choice using `input()`. Calculate the area of the selected shape, display the result as an integer using `int()`, use `if-elif-else` statements for decision making, show "Invalid choice" for incorrect inputs, and terminate the program when the user selects Exit.

```
1. Area of Circle
2. Area of Rectangle
3. Area of Square
4. Exit
Enter your choice: 1
Enter radius: 34
Area of Circle = 3629
```

```
1. Area of Circle
2. Area of Rectangle
3. Area of Square
4. Exit
Enter your choice: 2
Enter length: 65
Enter breadth: 54
Area of Rectangle = 3510
```

```
1. Area of Circle
2. Area of Rectangle
3. Area of Square
4. Exit
Enter your choice: 3
Enter height: 54
```

main.py

Output

```
1 while True:
2     print("\n1. Area of Circle")
3     print("2. Area of Rectangle")
4     print("3. Area of Square")
5     print("4. Exit")
6
7     choice = int(input("Enter your
choice: "))
8
9     if choice == 1:
10        radius = float(input("Enter
radius: "))
11        area = 3.14 * radius * radius
12        print("Area of Circle =",
int(area))
13
14        elif choice == 2:
15            length = float(input("Enter
length: "))
16            breadth = float(input("Enter
breadth: "))
17            area = length * breadth
18            print("Area of Rectangle =",
int(area))
19
20            elif choice == 3:
21                height = float(input("Enter
height: "))
22                area = height * height
23                print("Area of Square =",
int(area))
24
25            elif choice == 4:
```
