

S02 - Smart Cart Discount Engine

PROGRAM

```
class Cart:
    def __init__(self, amount, member, coupon):
        self.amount = amount
        self.member = member
        self.coupon = coupon

    def calculate(self):
        if self.member == "GOLD":
            discount = self.amount * 0.10
        elif self.member == "SILVER":
            discount = self.amount * 0.05
        else:
            discount = 0

        amount_after = self.amount - discount

        if self.coupon == "SAVE10" and self.amount >= 2000:
            amount_after -= amount_after * 0.10

        print("Final Amount =", round(amount_after, 2))

c = Cart(3000, "GOLD", "SAVE10")
c.calculate()
```

OUTPUT

OUTPUT

Final Amount = 2430.0
