

S07 - Dynamic Delivery Fee

PROGRAM

```
class Delivery:
    def __init__(self, order_amount, distance, peak):
        self.order_amount = order_amount
        self.distance = distance
        self.peak = peak

    def fee(self):
        if self.order_amount >= 500 and self.distance <= 5:
            charge = 0
        else:
            charge = 30

        if self.peak == "YES":
            charge += 20

        print("Delivery Fee =", charge)

d = Delivery(600, 4, "YES")
d.fee()
```

OUTPUT

Delivery Fee = 20
