

S04 - Peak-Time Electricity Bill

PROGRAM

```
class ElectricityBill:
    def __init__(self, units, peak):
        self.units = units
        self.peak = peak

    def calculate(self):
        units = self.units

        if units <= 100:
            charge = units * 2
        elif units <= 200:
            charge = (100 * 2) + ((units - 100) * 3)
        else:
            charge = (100 * 2) + (100 * 3) + ((units - 200) * 5)

        if self.peak == "YES":
            charge += units

        print("Bill =", charge)

e = ElectricityBill(250, "YES")
e.calculate()
```

OUTPUT

Bill = 1000
